# SUBWAY FILM PRODUCTION:

The goal of this project is to find the best place and time in the NY subway for a film production company to film a movie, where the subway is least crowded and has the least amount of people.

Daily Entries for Turnstile N551/R421/00-06-01 at AVENUE 1 Station

To start exploring this goal, I sorted the dataset ascending by the median for the daily station entries, then I took some of the stations with the least median, here I took the AVENUE 1 station and plotted it, and it had a maximum daily entree of 65 which is not a lot, and this tells me that this station could be a nice place to film a movie, but I still need to check the other stations before selecting the station that will be the best for filming a movie.
